

DSA rolls out PainChek® nationwide

An agreement between the App developer, PainChek Ltd, and Dementia Support Australia (DSA) will see 150 expert consultants across Australia access the TGA cleared medical health technology in a global first.

"This technology allows consultants who have been called to assist with someone where behaviour impacts on their care assess and identify if that person is in pain" says Associate Professor Colm Cunningham.

"The ability to communicate or be understood by caregivers can be impacted by someone living with dementia. When that person is in pain, it can sometimes be confused with aggressive behaviour when the reality is much different."

"As a result, pain for people living with dementia may often go undetected or under-treated. DSA estimates that more than 70% of their clients are experiencing under-treated or undiagnosed pain which impacts their quality of life significantly" adds Associate Professor Colm Cunningham.

Associate Professor Colm Cunningham -
Director Dementia Centre, HammondCare

For more information, go online at www.dementia.com.au and www.painchek.com

Our Dementia Support Australia consultants will be happy to show you the App as used within our work and share the results with your team.

Dementia Support Australia findings: Over half of all people living with dementia are not receiving adequate pain management.

PainChek® what it is and how it works

- World's first smartphone pain assessment and monitoring device.
- Automatically detects pain through facial recognition technology.
- The only pain App with regulatory clearance in Australia and Europe.

Benefits

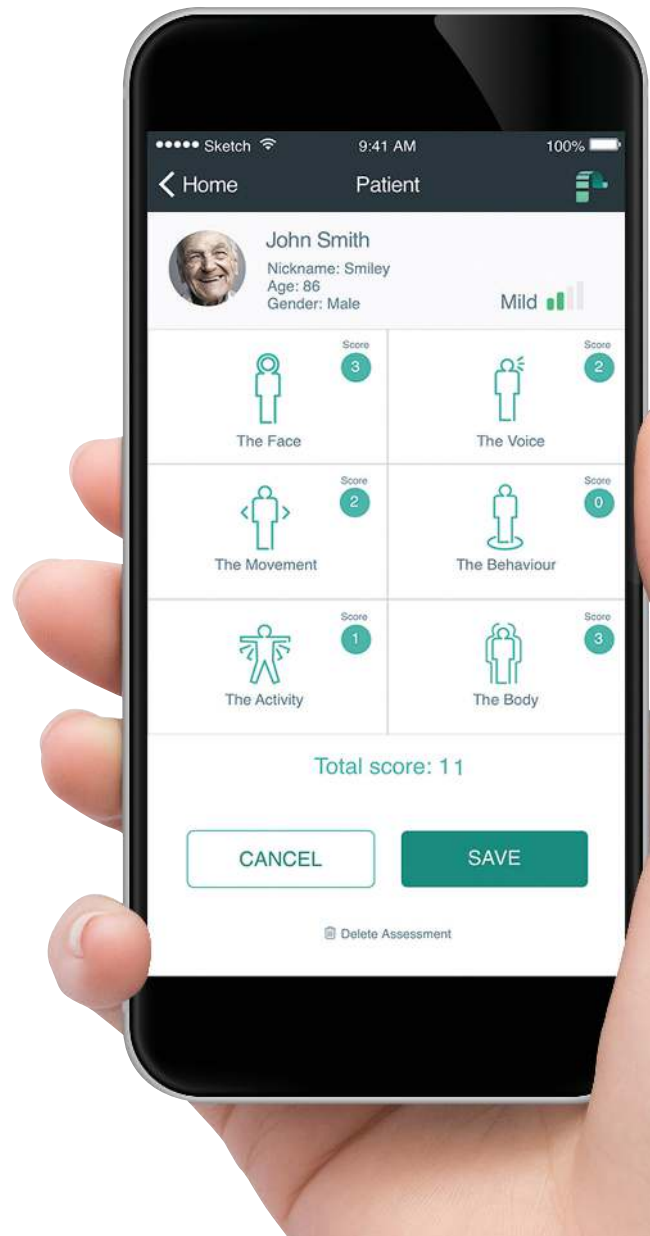

Caregivers and medical staff:

- Quick – complete a valid pain assessment in minutes.
- More empowered - PainChek® has been shown to accurately assess and monitor pain and can support carers in providing better treatment.

People living with dementia:

- Can benefit from a simpler detection process that allows for assessment and monitoring in their home or residential home.

Please note: PainChek® stores no images of clients.
