Improve care at home and reduce risk with intuitive, digital pain assessment.

Empowering carers and caregivers in a home care setting with a clinically proven pain assessment tool.

PainChek gives a voice to those who cannot verbalise their pain. Using the latest AI and facial recognition technology, PainChek takes the guesswork out of pain assessment — supporting improved care for individuals with dementia who are living at home, while streamlining efficiency for providers.

- Easy to use and operate via smart devices at the point of care.
- Facilitate continuity of care with accurate, ongoing monitoring by GPs, carers and relatives.
- Improve operational efficiency and eliminate manual processes with cloud based report sharing.
- Intuitive, tailored training available any time, anywhere.
